SUMMARY

I'm a beginner Fullstack developer, full of passion for code and learning. I'm looking for my first job opportunity. I've been studying Web Development, Soft Skills and Agile Methodologies for a year. Before that, I studied music in University and worked as a Museum Guide for several art exhibitions and cultural institutions. I learned english as a child by playing games, and still love and play retro games regularly. Besides technology and coding, I really enjoy studying self development and practicing meditation.

EDUCATION

Java Acceleration Course

AUG - OCT 2021

11-week acceleration course offered by CI&T company, where we're learning Java, the Spring framework and automated tests.

Fullstack Development Course

JUN 2020 - JUL 2021

One-year development course completed in Trybe school. The course is fully remote and project-based, with online classes every weekday, from 2PM to 8PM. We learned HTML, CSS and JavaScript, and frameworks like ReactJS and NodeJS. Throughout the course, we worked on many group projects, with client briefs and deadlines, simulating real projects. To make work easier and better, we used SCRUM and Kanban.

Bachelor of Music in Conducting

2014 - 2020

BM in Conducting awarded by Sao Paulo State University. Studying in university taught me how to prioritize my time, how to focus and the importance of networking. Although I decided not to follow this career path, I am very grateful for this time and have learned a lot from it.

SKILLS
